Cultural and scientific events involving the GIN

GIN's employees regularly contribute to placing science at the core of culture. To open dialog about science with other people, to question science, to give citizens the keys to understand the world in which they live, to provide knowledge, skills and solutions to health problems and to explain the scientific approach are all challenges, which we try to meet through our actions.

We are involved in the local organization of annual events, at both national and international levels, in collaboration with other laboratories in Grenoble. From theaters or cinemas to showrooms and the hall of our institute, these meetings offer experiments, activities and interactions organized and led by GIN's scientists for everyone to see.

Find all details and feedback for each event in the following section and the schedule of the upcoming editions on our ["Science for all" page](#) or on the [blog atoutcerveau \(in French\)](#).

Annual events

[Epilepsy Day](#)

february, european event

Mobilization of the scientific community to talk about it.

[Rare Disease Day](#)

february, international event

Promotion of public and political awareness of issues related to rare diseases.

[Brain Awareness Week](#)

mid-march, international event

A week dedicated to scientific cultural proposals to understand the functioning of the brain. GIN is a member of the steering committee.

["Pint of Science" Festival](#)

may, international event

A new festival to meet scientists in the cafés of the conurbation.

[Science Festival](#)

october-november, national event

An important event organized by higher education and research centers to expand access to knowledge.
